Air Temperature:

28-0cm: Problematic layer

MT

Co-ord: 45.06283N, -109.95435E

Sky Cover:

Elevation: 9750 ft

Slope Angle: 29°

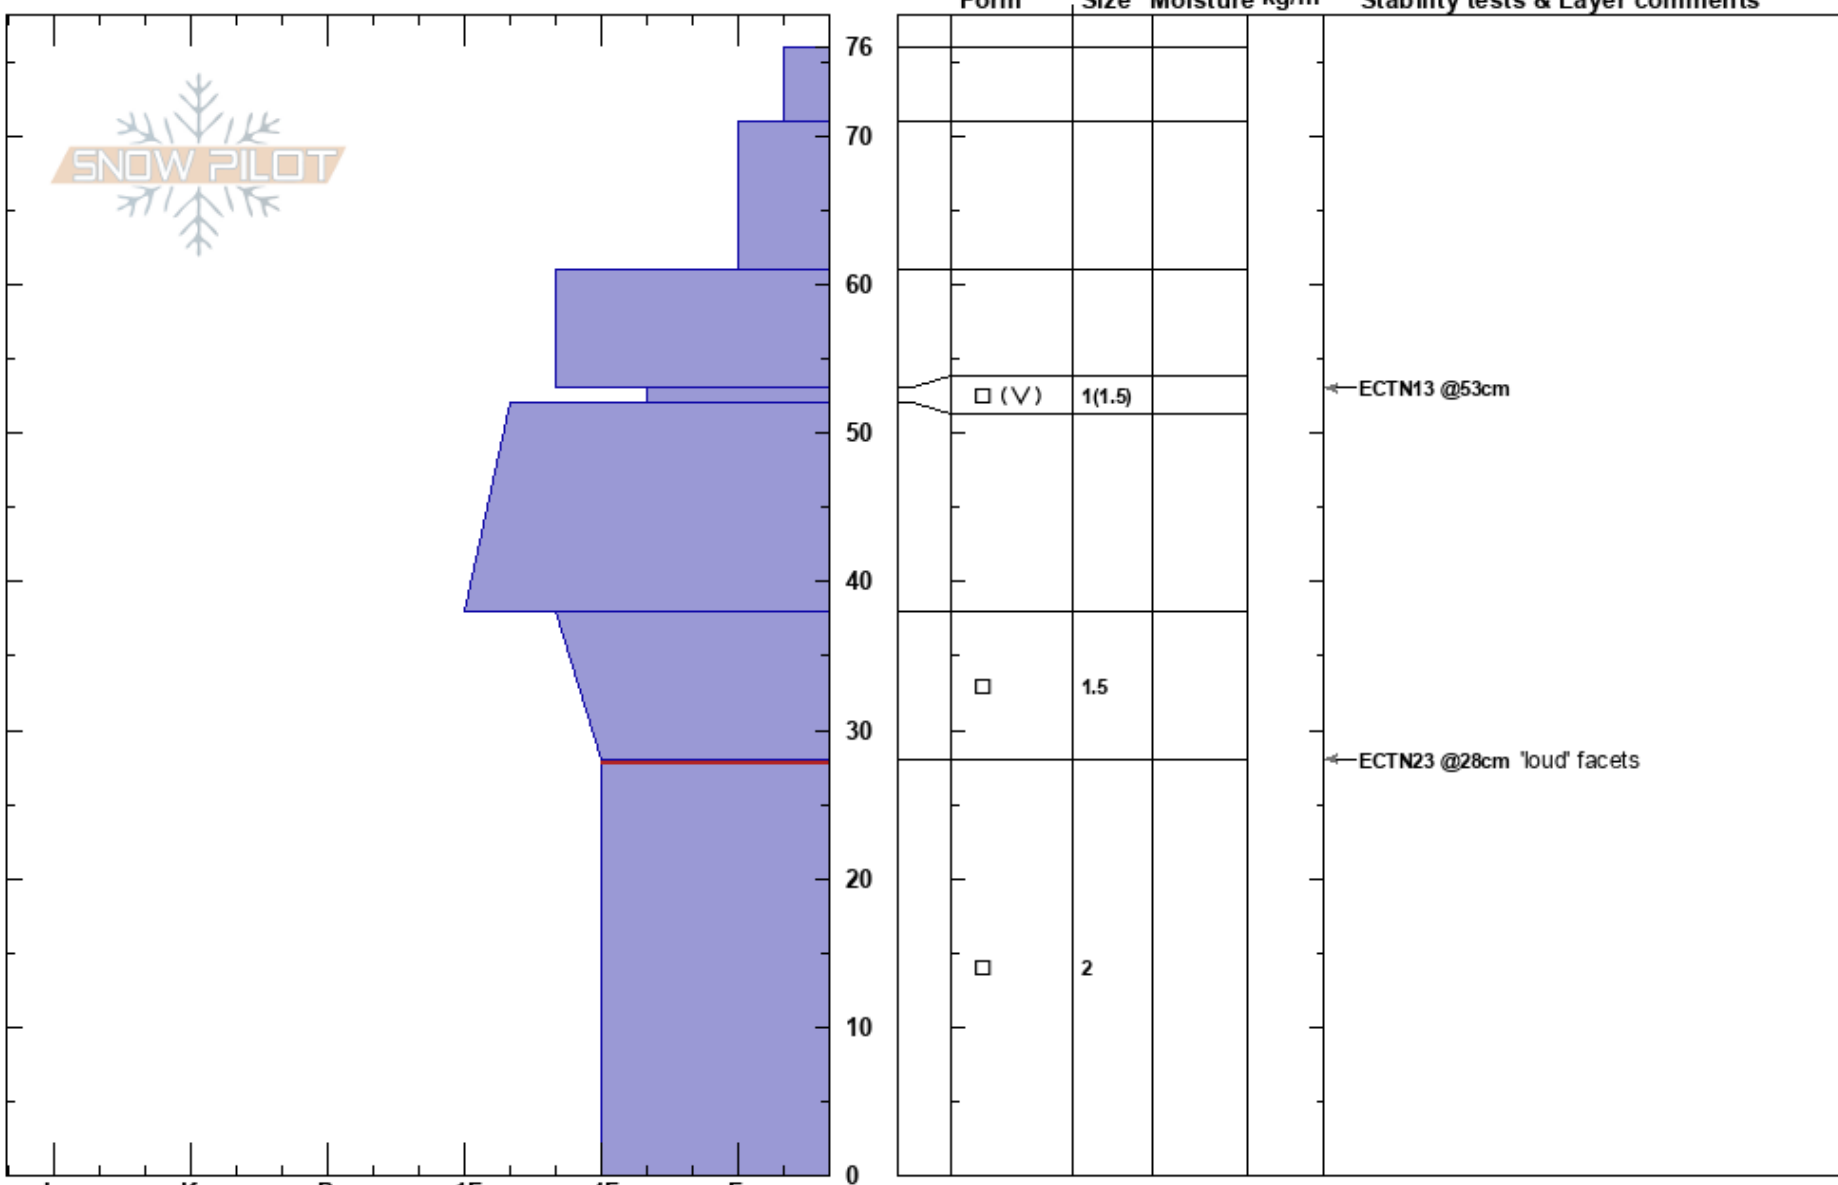

Precipitation:

Aspect: 79°

Wind Loading:

Wind:

Specifics: Collapsing, localized; We skied slope

Notes: Experienced a couple of large-ish collapses- each estimated around 15-20m width. The sound of them was subtle though, if you weren't paying close attention you would likely have missed them.

Also, the ECTN23 in this snowpit made a remarkably loud sound, though it didn't propagate in my test.
