 Slope Angle: 38°
 Wind Loading: previous

Stability:
 Air Temperature:
 Sky Cover: SCT
 Precipitation: NO
 Wind: S Light Breeze

HS:80
 PF:5
 PS: 1
 5-0cm:Problematic layer

Specifics: Pit is adjacent to avalanche: flank; Recent avalanche activity on similar slopes; Recent avalanche activity on different slopes

Notes: Dug adjacent to size 3 that likely released 20241127. Surprised to get two ECTPVs- base was cavernous talus and overlying slab was very dense. Probably hard to affect these basal layers due to very stout surface crust and midpack slab.
