

Lost Boys Pass  
 Lizard Range  
 BC  
 Elevation: 1740 m  
 Aspect: SW  
 Specifics:

Colas Durand  
 09/02/2018 - 12:00  
 Co-ord: 49.43462S, -115.10667E  
 Slope Angle: 28°  
 Wind Loading:

Stability: Fair  
 Air Temperature: -12.5°C PF:40  
 Sky Cover: CLR  
 Precipitation: NO  
 Wind: Calm

HS:244  
 224-221cm: Problematic layer  
 221-219cm: Feb 7-8 Rain+Temps drop  
 70-68cm: Nov. Crust ?

**Notes:** Graupel layer combined with a wind slab above and the rain crust below could work as weak layer and be an issue in specific wind loaded slopes.  
 The Nov. IFrc/Dec. FC combo doesn't seem to be active in this specific area at this particular elevation.  
 The high temperature gradient in the top pack could lead to a faceting process in the top layers, especially at the IFrc interface.
