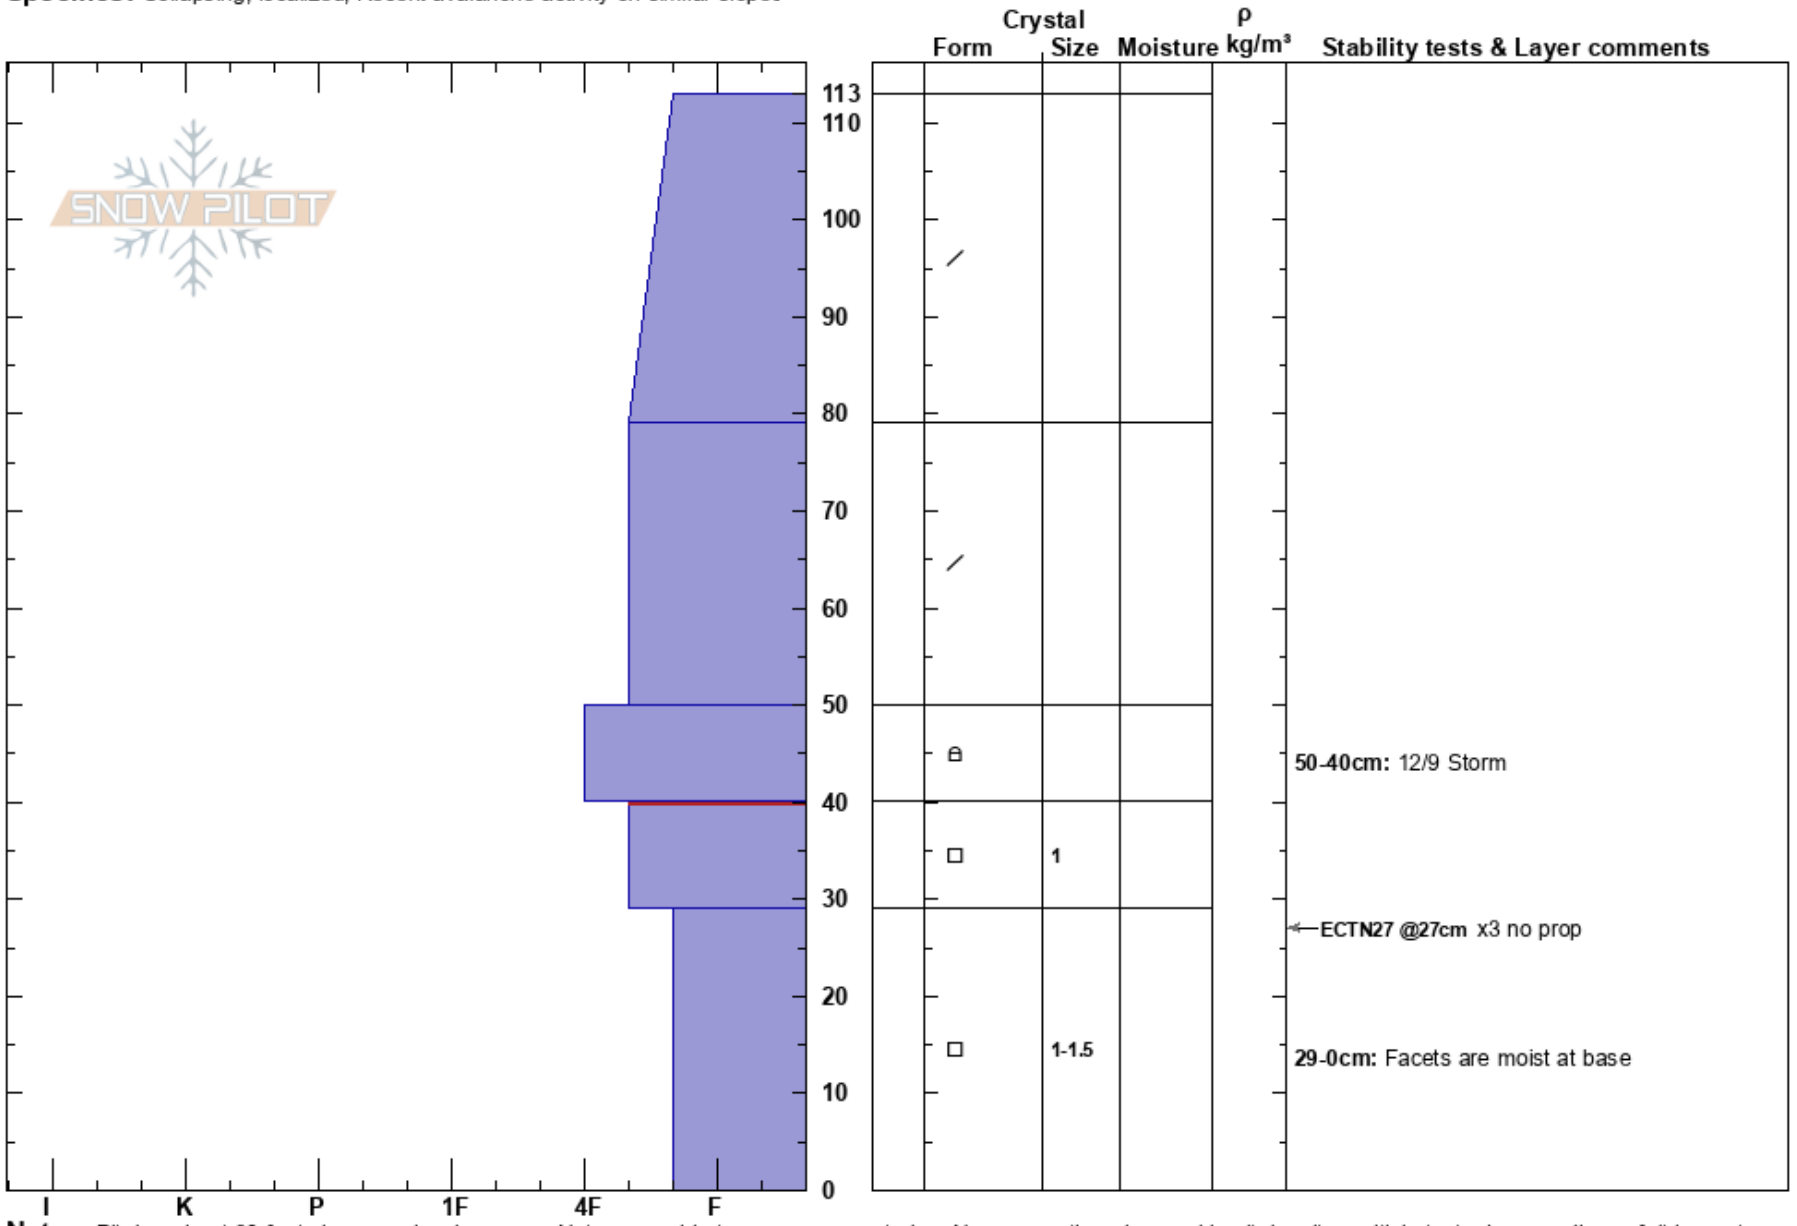
Co-ord: 43.48389N, -110.95205W
Slope Angle: 27°
Wind Loading:

Stability:
Air Temperature: 25°F
Sky Cover: BKN
Precipitation: NO
Wind: Calm

HS:113
PF:50
PS: 20

Layer Notes:
50-40cm: 12/9 Storm
40-29cm: Problematic layer
29-0cm: Facets are moist at base

Specifics: Collapsing, localized; Recent avalanche activity on similar slopes



Notes: Pit dug about 30 feet above avalanche crown. Not reasonable to access crown today. No propagation observed in pit despite multiple tests. Large collapse felt by party may have contributed this.
