

Solishteto Snowpit
 Pirin
 Bulgaria
Elevation: 2163 m
Aspect: W
Specifics: We skied slope

Kalin Markov
 19/01/2025 - 12:00
Co-ord: 41.66910N, 23.44509E
Slope Angle: 36°
Wind Loading: no

Stability: Very Good
Air Temperature: 3.5°C
Sky Cover: CLR
Precipitation: NO
Wind: Calm

HS: 168
PS: 20
Layer Notes:
 168-136cm: New snow previous weekend
 136-135cm: Melt-freeze crust old snow?
 136-135cm: Problematic layer
 135-100cm: Well compacted old snow

Notes: Very good stability on this slope

All stability test results do not fracture on a planar surface and there is no propagation in the ECT - there is more of a gradual, non-planar breakup of the snow into small chunks at the region indicated, which is a good sign.

The only avalanches observed are small, wet, loose-snow avalanches on steep, south facing slopes, especially near cliffs.
