 Co-ord:
 Slope Angle: 25°
 Wind Loading:

Stability: Good
 Air Temperature: 2°C
 Sky Cover: BKN
 Precipitation: S-1
 Wind: SW Moderate

HS:90
 PF:0
 PS:0
 40-38cm: Problematic layer

Specifics: Recent avalanche activity on similar slopes; Recent avalanche activity on different slopes; We skied slope

Notes: Snowpack isothermal, varied from moist to wet based upon structure. 10cm supportable crust from rain event on 22 March. Interesting to conduct tests on structured isothermal snow that has seen recent wet slab avalanching. Exhaustive pit analysis not conducted; more interested in comparing ECT and PST results for known culprit in many avalanches this late winter/early spring.
