 Slope Angle: 37°
 Wind Loading: previous

Stability:
 Air Temperature:
 Sky Cover: SCT
 Precipitation: NO
 Wind: Calm

HS:290
 PF:15
 60-73cm: laminate of crust/ facet
 118-120cm: Problematic layer

Specifics: Pit dug in a Ski Area

Notes: Huge variability in snow depth, 290cm where we were, same aspect and elevation 100m away was 40cm deep and mostly facets. After finished ECT pushed hard from the back of the block with shovel and the whole block slip on rain crust down 118.
