Layer Notes:  
 110-100cm: Rime forming on surface  
 55-53cm: Problematic layer  
 53-0cm: Facets larger near ground

**Notes:** The face has been stripped and reloaded over the past couple storms. Currently loading, no results from tests, top ~10cm wind slab is unreactive. Rain layer still acting as a good sliding surface, not enough energy to produce results. Pit dug by Mark R.
