 19.5-17cm: October rain crust  
 17-10cm: Problematic layer

19.5-17cm: October rain crust  
 ← ECTP21 @15cm

**Notes:** October rain crust down 50 cms is slowly breaking down, but still supportable. 4F slab down 15 cms also provide good support for travel on skis. We got two different ECT results, one failing on a layer of facets below rain crust, another failing on faceted layer above the crust. Both were full propagation.
